### DEPARTMENT OF MOLECULAR BIOLOGY

Investigation Name	Result	Unit	Bio. Ref. Range	Method
--------------------	--------	------	-----------------	--------

#### \*TrueNat RT PCR for Covid 19(OROPHARYNGEAL & NASOPHARYNGEAL SWAB)

##### TRUENAT RT PCR FOR COVID 19

E GENE (SCREENING)	NOT DETECTED			By True NAT RT PCR
ORF1A GENE (CONFIRMATORY)	NOT DETECTED			By True NAT RT PCR
SARS COV-2	NEGATIVE			By True NAT RT PCR

#### Truenat COVID-19 Qualitative RT PCR

**Analyzer:** Truelab™ micro PCR Workstation

**Principle:** Molecular Polymerase chain reaction (True NAT RT PCR)

**ICMR Registration for Covid-19 Testing:** SDCPNU

#### Interpretation

- E.gene is common gene for all 'Corona Viruses' ORF1A Gene in specific gene for 'SARS CoV-'2
- Negative result does not rule out the possibility of Covid-19 infection. Presence of inhibitors, mutations and insufficient organism RNA can influence the result. False-negative results may be seen in samples collected too early or too late in the clinical course of infection. Kindly refer to the latest ICMR guidelines.
- A single negative test result particularly if this is from an upper respiratory tract specimen, does not exclude infection. A positive alternate pathogen does not necessarily rule out Covid-19 infection as little is yet known about the role of coinfections.

**The Performance of this method has been Validated and Evaluated by ICMR & has been recommended by ICMR for Screening & Confirmation of COVID-19.**

**Note:** Assay result should not be interpreted only in the context of other laboratory findings and the total clinical status of patient. This report is for the perusal of doctor only. Not for medico legal cases. Clinical correlation is essential. Please contact us in case of unexpected result.

  
Dr. Puja Gupta  
MBBS MD (B.J)  
Consultant Pathologist  
MCI -IMR- 19/77
